

After years of trial and development, Campagnola have coupled the most efficient, hand-held methods of picking olives with the finest and most reliable materials available to bring you the Alice & Holly 12 volt electromechanical olive harvesters.

Pick the best for your harvest

NEW Campagnola Holly
Budget electronic olive harvester

Built on the same principles as the Alice, the Holly is recommended for smaller olive groves.

The harvesting head weighs only 710g giving it an overall weight of 2.6kg on a 1.7m extension pole.

Like all Campagnola extensions, fixed and telescopic poles to suit the Alice & Holly harvesters are made from anodized aluminium. This makes them strong and durable without compromising on weight. These extension poles are also interchangeable so that multiple poles can be used with the same harvester.

ALICE

The latest in harvesting technology. Designed to make your job easier.

Using dual combs, specially designed to suit a broad range of varieties, the Alice works by moving each comb in a precise elliptical motion. This unique reciprocating movement proves extremely effective at removing olives of numerous varieties and works especially well on unpruned trees. As both sets of fingers move in opposing directions, the majority of vibrations normally felt by the operator are cancelled out making the Alice very easy to use for extended periods of time. At 28cm, the thermoplastic fingers will dislodge the hardest to reach olives without removing large amounts of foliage. The Alice requires the purchase of an 100-amp hour, 12-volt battery and charger for 8+ hours of working time. The Campagnola battery trolley is optional.

ALICE R2	170cm	3010g	12V	7-8Ah
ALICE R6	150-220cm	3378g	12V	7-8Ah
ALICE R4	185-270cm	3540g	12V	7-8Ah
